Agentic RAG over MCP (HTTP)

list all the tasks in ror lab 4

 Calling MCP tool: ['retrieve_context'] Here are all the tasks in **Ruby on Rails: Lab Day 4**, organized by section:

Lab 4A: new_rails (MVC)

1. Branching

Create a new branch from `main` and name it `lab_four_mvc`.

2. Scaffolding

Use scaffolding to set up a One-to-Many relationship (User 1:M Post).

3. Associations (One-to-Many)

Create a `creator` association in the `User` model that links to the `Post` model (Creator 1:M Post).

4. Associations (Many-to-Many)

Create a new Many-to-Many association (Post M:M Editor) by manually creating the join table.

 Do **not** use `has_and_belongs_to_many`.

Lab 4B: API Mode

1. Setup

Create a new repository named `lab_four_api` in your account using Rails API mode (`rails new lab_four_api --api`).

2. Scaffolding

Replicate the base setup from Lab 4A by creating the app using scaffolding with a One-to-Many relationship (User 1:M Post).

3. API Testing

Create API requests for all CRUD operations using Postman (or an alternative API client).

4. Exporting API Collection

Export your workspace/collection from Postman as a JSON file.

Create a new file named `api.txt` in the root directory of your Rails project and paste the exported JSON directly into it.

5. Submission

Add the GitHub link to the `lab_four_api` repository into the PR description of your `lab_four_mvc` Pull Request (from Lab 4A).

✅ These tasks are structured across two parts: **Lab 4A (MVC)** and **Lab 4B (API Mode)**. Let me know if you'd like a breakdown of any specific section!
