

Lab 3

1. Add validation using form request files on Store & Update

<https://laravel.com/docs/master/validation#creating-form-requests>

2. - Title & description are required , **minimum length** for title is 3 **chars** and **unique**, for **description** the **minimum length** is 10 chars ,make sure when updating post without changing Title it still works

Also make sure that **no one hacks** you and send an **id of post creator** that doesn't exist in the database

3. - Make sure to display error messages of failed validation

<https://laravel.com/docs/master/validation#quick-displaying-validation-errors>

4. - Make our post have **slug** , using this package (the **slug** will be generated from the post **title** , users aren't allowed to fill slug or send it in the request , search for

\$request->validated() or **\$request->only()**

(Read the package documentation carefully)

<https://github.com/cviebrock/eloquent-sluggable>

Title Example

Slug Example

Hello Laravel

hello-laravel

5. Show the [slug](#) column In [Index](#) page
6. Create comments and add the one-to-many relation to the post table, and the user table, in the [show of post](#) Displays the comments for this post and displays who added this post and who added these comments ([relation between user and comments, user and posts, post and comments](#))
7. Make sure no one can comment unless he logged in to the app
8. - Read what is [Queue job](#) and [database queue driver](#) then [create Queue Job](#) called **PruneOldPostsJob** that when dispatched it deletes posts that are created from 2 years ago check mohamed said [video to understand more](#)
9. - Read what is [Task Scheduling](#) then [schedule PruneOldPostsJob](#) to run daily at midnight
10. Install [laravel breeze](#) , and choose [vue + Inertia.js](#)
11. - Explore the code structure and know more about [Inertia.js](#)

Bonus (Must Solve)

1. - Make [custom validation rule](#) , that makes sure the user is only allowed to create **3** posts and if he exceeded this number we show a validation error message

<https://laravel.com/docs/master/validation#custom-validation-rules>

2. - Use this package to add **Tags** to post , the user will enter comma separated tags

<https://github.com/spatie/laravel-tags>
