Summary:

Software Engineer passionate about building scalable, secure, and efficient web applications using Java and Spring Boot. Applying solid design principles and real-world problem-solving to deliver high-quality software. Also have solid working knowledge of frontend development with React, allowing me to collaborate across the full stack when needed. My focus is not just on writing code, but on building robust software systems that are production-ready, maintainable, and aligned with business needs.

Education:

- **Bachelor's Degree in Computer and Information Sciences**

Faculty of Computers and Information –Minia University

2018 – 2022

Skills:

- Programming Languages: *Java · JavaScript · C++*
- Web Development: *Spring boot · React.js · Html · CSS · Bootstrap · Redux.js*
- Database Management: *PostgreSQL · MongoDB · MySQL*
- Development & DevOps Tools: *Git · GitHub · Docker · Postman · IntelliJ · VS Code*
- Testing: *JUnit · Mockito*
- Best Practices: *Agile Methodologies · Clean Code · Problem Solving · Debugging*

Projects:

- **Leave Request Management System:** Spring boot | PostgreSQL | JWT
 - ✓ Developed a scalable and secure role-based system for managing employee leave requests within an organization
 - ✓ Enabled employees to submit leave requests with a structured workflow for review and approval by admins.
 - ✓ Role- Implemented role-based access control using Spring Security and JWT authentication.
 - ✓ Ensured data integrity and consistency using JPA and Hibernate ORM.
- **Graduation Project – Art Corner:** Nodejs | MongoDB | JWT
 - ✓ Developed a RESTful backend for an art management platform allowing artists to upload artworks, courses, and events.
 - ✓ Designed and implemented role-based access for two types of users: regular users and artists.
 - ✓ Built secure authentication and authorization mechanisms with JWT tokens.
